3-pole thermal overload relays for TeSys K contactors

These overload relays are designed for the protection of motors. They are compensated and phase failure sensitive. Resetting can either be manual or automatic.
Direct mounting: under the contactor for versions with screw clamp terminals only; pre-wired terminals, see pages B11/28 and B11/30.
Separate mounting: using terminal block LA7K0064 (see below).
On the front face of the overload relay:
■ selection of reset mode: Manual (marked H) or Automatic (marked A),
■ red pushbutton: Trip Test function,
■ blue pushbutton: Stop and manual Reset,
■ yellow trip flag indicator: overload relay tripped.
Protection by magnetic circuit breaker GV2LE, see pages coordination tables chapter A6.

Class 10 A (the standard specifies a tripping time of between 2 and 10 seconds at 7.2 In)

Table with 5 columns: Relay setting range, Fuses to be used with selected relay (Maximum rating, Type), and Reference. It lists various relay models and their corresponding fuse ratings and types.
